

Information

Project „Don't waste, save! The earth is yours“ addresses the common problems of the globalizing world due to climate change, the reduction of drinking water resources and usable agricultural land and the lack of sustainable energy resources. Today, industrialization, the development of technology, the increase of the human population has brought with it many problems. Steps that need to be taken to solve this problem are the common problem that all countries in the world need to work together. To inform about the problems of environmental protection, we have started activities at the international level. Partners in the project are: Bulgaria, Latvia, Turkey, The Republic of North Macedonia, Greece and Romania. Each partner organizes a seminar on waste recycling and the

Goals

Students should:

- To recycle selectively in their classroom and home;
- To recognize waste according to their material, labels;
- To recognize waste as being organic and recyclable;
- To reuse wastes in a creative manner;
- To reuse rain water;
- To use ICT to produce patterns;

Results

- Selection of the project logo
- Erasmus + boards
- Collection of blue lid, waste oil, waste battery, waste paper from students and delivery to the relevant institutions
- Conversion of glass bottles, plastic boxes, plastic cups into toys
- Celebration of World Forest Week on March 21
- Celebration of World Water Day on March 22
- Planting flowers in pots formed from waste materials in the classroom
- Placing a container for irrigating trees and flowers in school gardens and collecting rainwater
- Drawing competition "My environment and me", exhibition
- Use of waste materials to create children's figures
- The germination of dirty and clean soil in schools
- "Spring cleaning in front of our house" in cooperation with parents around schools and homes
- Determining the purest class
- Celebration of the day of the environment on June 5
- Making models of houses from unnecessary materials

Benefits

Children are the citizens of the world of the future. Every child should be aware of global problems, can create solutions for those who are sensitive to the environment, natural life. Through the project activities the students get acquainted with the separate collection of household waste and their recycling.

They are aware of the reasons for the reduction of drinking water resources. They receive information about the causes, results and solutions of global warming.

They use a barrel of water to collect rainwater. With this rainwater they water green areas in the school. This raises awareness of water saving.

Global warming and climate change are common problems on our planet. Research has been conducted on the topic of global warming. Each school presented a visual representation of the region's past and present state with the effect of the causes of climate change through global warming.
